

GT Foundation Certificate in Datamaker

The GT foundation certificate in Datamaker covers all the essentials you need to know in order to get started as a professional tester and to help you understand the basic principles involved with this exciting and innovative software tool. This 4 stage qualification is designed to introduce testing concepts, methods and best practices. Successful completion of the course will lead to the GT Foundation Certificate in data maker testing.

Who Should Attend

Professionals looking to enhance their knowledge of database software and database testing to an advanced level. This is particularly suited to testers that have experience with the Oracle e-business suites and are capable of building test data for a number of the suites. This course is ideally suited to DBA's, Testing managers, Chief Information Architects or any experienced IT consultants who want to gain an understanding of the latest software methodology in testing.

Objectives

To understand the reasons behind why we test, the importance of creating good quality data as opposed to simply copying production data. The importance of ensuring legal compliance and the automated aspects of the software which enable you to achieve this. To enable candidates to understand the working functionality of...

1. [Creating test data from scratch](#)
2. [Subsetting existing data](#)
3. [Anonymising sensitive data](#)
4. [Creating a test data repository](#)
5. [Enabling themselves and other users to access test data on demand](#)

Course Contents

The full Datamaker course covers...

- [1 Hour demonstration via webinar](#)
- [2 hour One to One Training covering installation and support](#)
- [One week full trial of the software to use with your own test data](#)
- [The successful completion of a Webinar Examination](#)

This professional qualification is recognized by many firms as the standard by which we measure our testing staff and is becoming the industry standard data maker accreditation. On qualification, you will gain official accreditation and certification from Grid-Tools Ltd and become officially recognised as a qualified expert in the deployment of data maker as a software solution to testing database problems.
