

# Enterprise-wide test data management

Quickly provision, manage and enhance data for testing and development

Data Masking

Data Coverage

Data Creation

Database Subsetting

SOA Data Management

Centralized Data Management

Think automation. Think coverage. Think security.

Think better test data.

 **Datamaker**<sup>TM</sup>

Think test data, think Datamaker

**Grid-Tools**  
The power of test data

Specialists in data creation, data masking and test data management

*“Can you create test data? Can you populate it into a database? Can you do it for a reasonable cost? Grid-Tools has proven they can do all of this. In truth, I would be surprised if anyone launching a big system could do without a tool like this. It really is a mandatory thing to do.”*

**- sQuidcard**

**A complete test data management suite**

**Create, subset and mask test data at the press of a button**

**Data creation:** Create high-quality test data from scratch with all of the characteristics and relationships of production data for data-driven testing

**Database subsetting:** Create smaller, targeted, business intact versions of databases for testing and development

**Data masking:** Obscure or de-identify specific data within a database table or flat file to ensure data security is maintained and sensitive customer information is not leaked

**Centralized data management:** Use a test data repository to manage all of your data assets, enabling you to enhance, edit and manipulate test data in one central location

**Data coverage:** Create rich combinations of data automatically, ensuring testing projects relying heavily on underlying data are much more effective

**SOA data management:** Create the back-end actual and expected data to service SOA requests and quickly build rich, well managed data pools to feed complex inter-related SOA services
